

## DRYVAC 1010™ water repellent millwork preservative

---

DRYVAC 1010™ water repellent millwork preservative has been developed for treating millwork, and in particular door and window frame components. The product is registered as a pesticide with the Pest Management Regulatory Agency of Health Canada: PCP 24246. The biologically active (fungicidal) ingredient is propiconazole. The water repellent components are a proprietary blend of hydrocarbons which confer effective water repellency without compromising the adhesion of water based coatings.

### Advantages:

- Has low viscosity so penetrates wood readily
- Does not cause grain raising so the milled finish on the wood surfaces is not compromised
- Effective: no complaint of wood rot or decay since product went on the market in 1996
- Has an effective shelf life of five years.

### Application:

Spray, dip, brush or double vacuum

### Properties

Appearance: Clear, free flowing liquid

### Handling

For specific instructions on handling refer to the Safety Data Sheet and Label

### Packaging

Tanker truck  
1000L totes, 200L drums and 18.9L pails
